

WACS meeting 2

Transcribed by [TurboScribe](#). [Go Unlimited](#) to remove this message.

The earlier we see this, the earlier we understand this, the faster and the better we'll learn. So I wanted to have that mindset as we go into this session. Thank you all.

Thank you. Thank you. So I think I should leave the research part so that we don't... Thank you for coming here for the lecture.

So that we don't leave the research for you. So please let's not have any questions. Yes, because this, the point I'm trying to end the question, what I'm trying to get at is where do you understand? Let's just move down just a little bit.

So, where is men being number one? So, we are at least negative space. Well, actually, on the other side of this, I just want to give us, so, this is how the international environment works. So, for progressive men's factors, men have really been shown to be number one for their fitness.

And this is why we have to, you know, bench, clean and cleanse, you know, by the genetic diseases. Yes. This is why we have to prune all of them.

I don't know if HR is the same. I can take HR's opinion. It doesn't matter.

This is why we need to adjust. Because, I see like this, there's wax. What is the business that must grow exponentially? Wax.

In fact, we are moving into one of these. What is the business that needs to grow? Again, we have always an extension. So, I would say our number one business statement that we need, there's an aspect.

I think it's item number five. Yeah, item number five, that we have arguments to produce. This is where, you know, we immediately need guidance.

Because, our number one point is, how do we balance this? How do we balance growing wax and still carrying on these loads on the extension projects, right? And this is what is leading to the number one business statement which is this alignment of priorities. This alignment of priorities. So, as it seems, Steve, are you with us? As it seems, we can be so task-focused, yeah? And when our priorities need to change, we are so fixated on what we are doing that we find it very difficult for us to adapt.

Every time we have a strategic session, every time we have a meeting, not just a session, in executive management, there's always a priority coming up at that meeting. So, what we, as people who put in our CV, ability to work under pressure, ability to multitask, what we, that would add to our CV, what we are going to do is that we're going to find a way to manage and balance

things. We are meant to.

In fact, we put some skills there. We put in our CV to balance those things. If it's the tools we need, we need to say, these are the tools we need.

If it's the resources we need, we need to say, these are the resources. Here, we don't say, we can't do this. We find a way to do this, right? So, if we have not built a skill of prioritizing to manage tasks like this, we will have this alignment of priorities.

Let me tell you why I'm saying this, guys. Margaret, are you with us? We, as managers, we have seen so many things fall out of our hands. We have met so many.

Myself and John will go from this heaven and hell to release, release. The next minute, priority has changed. We will not forget the things we have promised to.

And the people who we promised things to, they are taking notes. Tomorrow, the next time I say, John, where is Teshari? John will say, bless you, Jesus. John, now look at me.

I say, Paul, where is Teshari? And I say, John, which is Teshari? So, but we're just managing ourselves like that. So, but why I'm saying this is that we have seen so many things. We have seen all the balls that have been thrown, right? So, we need to, and John is going to show us some of the things, operational strategies in Agenda 4, which were put in place.

And we are still going to enforce them to balance and manage our priorities. Resource constraint. Guys, resource constraint is real.

I know all of you are feeling it. You are all of you are feeling it. But you will not die.

You know it. Happiness, you can't do anything. Happiness has capacity.

And capacity is overflowing. Capacity, I'm telling you. You don't need to speak, because I will speak for you in my game.

Don't worry. I know what you are going through. You are doing very well.

So, resource constraint. Resource can come in various ways. It can come in skills, training, resources.

Everybody is feeling it. Chama also is feeling it. She's just come, but she's always complaining.

I need to do that. I need to do that. So, we need laptop.

We need everything. What we are going to do, we are going to create a very, very open form of communication. Let's not... Inasmuch as we know that yes, they are going to push back, but our responsibility is to push forward.

Push forward to be messy. It's not me and Mr. Hosa that should come to you and say, oh, that is... That is frustrating. I don't like that.

I don't want the office to react to their own problem. It's not me. It's not that we come and say your Internet is bad, your office is in trouble, et cetera.

No. Everybody needs to have this sense of direction. Because even when we enter there, sometimes people are running to see their letter or running to see it.

We are just running somewhere. So, we've got to think. Everybody needs to own their resources, escalate it, and push for it.

If he doesn't review it before Friday, it is my fault because his deputy is busy. You are meant to follow up, sir, have you reviewed it already? Sir, it's on Friday, sir. Sir, I want each and every one of us here to have that sense of ownership because there are two main moving parts and that's how we can achieve this, right? So also risk, that's why we also call this a pizza head.

There is, there is, there is. It's very high risk. Because of the kind of business that we run, we run a very high risk business.

And all of us should be very aware of that. You guys don't know. I'm not here to be your CCOs.

We are customers. So the last time I was in the CCOs, that was the last time I was there. Someone walked up and said, Oga, should we protect that room? I'm a ICBC.

So any of us that can enter that room, we will do it any time. FCCC. See, whoever has the right to us.

Yes, we do. ICBC. We get that letter every day.

So, there is the potential. We are customers. So there is the potential there.

So, I'm saying this because it's the responsibility of every team member. I raise it. It's your responsibility.

To go to the expo. It's your responsibility. Badging.

It's your responsibility. If all I was going to say was what? Simple things as terms of use on our platform. That is not there.

Terms of privacy. That is not on our platform. We can pay fine for not having terms of use.

Disagreement. Non-disclosure. Disclaimers.

Things as important as disclaimers. Badging. So, this is what I'm telling you.

Disclaimers can put us in jail. So please, don't say, Jesus, you are just doing your work and keep it like that. Let's always escalate.

So, it's also your responsibility, right? You are somehow the custodian of our terms of use. We have documents. We have documents that expire.

There is no way to keep the DSS together. There is no way to keep that. That document.

We don't have it. At this meeting. At this meeting.

We just checked. We don't have it. We don't have it.

So, just tell me. Yes. I also have it.

We checked. We checked. You checked? We checked.

We check. We check. If we have the agreement.

So, next. So, seems structured. So, let me, very first of all, I'm just going to please walk in.

Let's just tell the people that I'm using to promote family happiness. Ah. Righteous.

No, righteous doesn't have anything to do with that. Freefall. Freefall's on his video.

Righteous doesn't have anything to do with that. Freefall, who are you interested in taking care of next? It's good. No, no, she's nice.

She's cute. Mmm. Mmm.

Mmm. She's got a really good relationship with you so. I don't think she has anything to do with giving you money.

In order to be your best friend when we're alone you need to feel like a friend. You need to feel like a best friend. Uh huh.

She's quiet. So she feels like a friend, and you need to feel like a best friend. So she doesn't feel like a bastard in somebody else's life.

I mean, it's good morning. Hello. Hello.

We...guys, I need everybody to step up a bit. Yeah. So, this is important.

This is really important. So, we start out as a...to say, with all these things going on, we need to have some form of organic ground. Across the board, across the team.

And, after some review, this is...this is what we came up with. This is what we are going to do. And we are going to share the rules.

The final one. The final one. Everybody.

Some of you over here... So, before you... Sorry. Some of you over here will be repurposed based on specific needs. If the business needs you here, we will repurpose you here.

If you see that this is your strength, we will repurpose you here. And we do...sometimes we do...to see them in what position for long. Sometimes it can be moved across division.

It can be moved across businesses. It can be moved across positions here. And this, in the future, can become project manager.

That's where I want to be. Grounded. Okay, guys.

So, we'll be... We'll be... In respect to... And this... Right? We still... We are running it as an organization itself. And we all know what it means to have an organization. We have different units.

We have business operations. We have business development. So, for... For the core team itself, we have an administrative unit and we have a technology class.

All this. Amen? Amen. All right.

What team is... I need the lookups. They're looking at us. They are too far.

So, we have... Can you zoom it out? Zoom. Nice. Zoom.

Yes. So, we're also going to share... No, we're not going to share teams. Once we have a final... We're not going to share teams.

We're not going to share teams. But that's going to give us an overview of what our team structure looks like. Right? So, for the core team itself, you can see the room like this.

You know, like I said, we have other units that are collaborating with. So, for the core team itself, you can go back to the core team. We have the admin.

We split them into the admin and the technology. Right? So, for the administrative part, that's where the key angle comes in. Which I'm going to tell you about first.

Back again. Are you with us? Feel free to take a walk. I'm feeling tired.

So, project management office. So, I want us to know how we can channel our community to a discussion. So, under project management office, we have the CRM.

For the CRM, you have the needs support. You have the way of cleaning the room, the needs support at the moment. You have the project support team where you have Messi.

You have Samuel. Zoom. Just move it.

Then we have... Okay, that's my chair. I'm actually breaking it as well. So, these are the people in the CRM at the moment.

Right? You also have the project management units under the PM. The PM is the office. You also have the PM.

So, the units where we have the assistants or the associate project manager. For some of us who are not aware at the moment, that is laying down the rules for us. That is also... We also call it... We call it controlling PM.

Right? Under him, we also have the support. So, most likely, when a bad thing comes, we intend to update the rules of the project management support. But also, the rule when WACS... The chapter of WACS was set up was that people here who are not project supports, who are in the call center right now, are meant to grow out of the call center.

One of the reasons would be because you must have the career paths. You cannot be in the call center for a month. You can be there due to a certification that is... But with respect to... Some of you can go to the PM or support.

Some of you can go to the project and other departments. So that we have core members and other people to call on who are going to train. If you notice, my move went from there.

Why? That's why she can't stay at the office. I'm being very specific. It seems to me like that.

Although she still plays the role of lead support, we are going to take that role away from her very soon. Like, have someone else come to the shoes of the lead support. So, that's the explaining PM.

So, for project management associates, controlling, and here we have the director PM. That's not the role we use. Supporting PM or controlling PM.

So, this is... For those of you who are not aware of what BAMD is doing with us here now, BAMD is in the role of associate PM for us right now. And, you can see that we are under all those. So, BAMDB, NAPTAS, TPSMS, houses, NECGC.

Go, go ahead. Go, go ahead. You are not escaping anymore.

Account and reconciliation too, is under administrative. Right now, we have the accounts. We have the account and reconciliation specialist role.

We have played that role at the moment. You are meant to have support. Most likely, that intent or call members or... So, as I'm saying this, I want you to also know your resource gap.

We are also working on this. Know your resource gap. Know how we are moving things forward.

So, please know this is for associates. Is this the existing structure or the new structure? No, this is the structure we are currently working on is management. Remember, this is not for four months.

Not four months? Yes, four months. So, this is what we want to do in HR. Hold on.

It's not working. It's on. So, technology.

Other technology, right? You have the product management office. You have Uncle John playing that role at the moment. Right? As the product manager.

Other than the product management office, you have the business analytics unit. Our DAs. We fund other things as well.

Other than the product... We welcome each and every one of you. We are waiting for you. We are here at your invitation as well.

Please, please. This is very much... Yeah, that would be much better. For you.

It's still working. So, directly, like I'm saying, I want to identify where we are. Identify the gaps.

Please, guys, I need our attention. I need our attention, please. I need our attention.

Can we put that backwards, please? Because I'm not just showing you a photograph. This is where we identify our gaps. Both personal gaps, resource that we need, know where we are.

From here, we can also see our growth. Our growth pattern within the organization. Like I said, we are still having... When you take your feedback, now that you're an aging child, it's something to sit in and go back to.

It's an easy management. This is how we tend to go on. This whole unit that we have under this umbrella.

So, for products, we also have the product management unit. We have the product associates. I think there's a major one right now.

We need the product support. There's a gap there. You understand where I am? Identify that.

I just have to save that. So, you also identify the gaps and the resources that we need. So, we also have the software.

We already know who the organizer is here. The head of the software development unit is run by the CTO, Mr. Ben. Then, for these projects, these are our projects here, a lead developer, a team lead for this nice project.

And, we're also going to get... As I said, we're also going to get some of you who are feeling this way. For this project in specific. So, we have those ones here.

I think we're taking a lot of our time. So, we also have business operational units that is run by... Like we said, we have a lot of risk. You understand? They're about to cut our heads.

Because we left that. Anyway, though, there's no need. Because R&D is essential.

Everybody rotates around here. R&D is the core. So, business operations.

For those of you who don't know, Mr. Peter is the head of the unit. For those of you who don't know... So, head of business operations. Mr. Peter is there.

So, speaking to these are our projects, we are saying there's a gap. There's a gap for somebody who supports Mr. Peter. I know this gap wasn't needed there.

Or lack was made to grow more of my partnership. Because I'm not cutting my partnership. So, we know that we need, for NAPTA, for WADS, for TPS, we know that we need people in business operations to fill in this gap.

As an associate that we support. So, for business developments, yes, we know that for these approaches, right now, Mr. Ausa, Mr. Ausa, Margaret, are playing that role. Mr. Ausa, explain the role for us.

No, Mr. Bambini has been supporting in that aspect. He has been very much for that. So, now, currently, Mr. Ausa is the head of the business called FAT.

Since before, he's the head of business development. We know there's a gap. There's a need for an associate.

That's why I said that Margaret, I didn't say it will, for a while, have been the one, you know. Because we are not in a great age yet. That's why, that's what you have to do when you have to go to see, fill out these files, meet some customers.

I'm pretty sure that's the way that engages them. So, you also need, that's why you're in this room. So, you also need to support who needs to go and teach the best of yourself, students, communicating, and, you know, being able to work with people.

That's a very, how long have you been in ITS? Six months. Six months? Yes. And everybody knows you, and you know they are new? Yes, ma'am.

So, you share the rights. That's nice. She just came to give, to share the rights.

I'm not giving her the rights. I'm not giving her the rights. So, Margaret knows a lot of things that

are not available.

So, that's, it can zoom out now. So, that is the team structure across WATS and the extension of Bridges. I don't know if we have... There are some things that I wanted to add.

I said it earlier. In terms of our support structure, because our team is expanding, the support team will expand also, as much as Gwen is making our support teams. Now, our support teams are going to be, because there has to be a definition of responsibilities, our support teams who have been joining these split into two divisions.

There will be the operational support team, and that's when people that don't support me also will be joining. Now, there will also be the strategic support team. What's their job? There are some meetings that we don't need to attend.

There are some meetings that we don't need to come, even if they come. The strategic support team is supposed to be the one to know what is going to happen, what is the issue, key leads. What do we need to do to enter ourselves into that ecosystem? Right now, Margaret has been trying to play her role in Hypebeast, and hopefully she will help us grow that path too, in terms of not just, support should not just be people answering those calls and solving problems.

It's creating our entrainment methodologies, our strategy, because it's not what applies in Hypebeast that we apply in OEGF. Not what applies in OEGF, we apply in, what's called a GMB. What applies in GMB is not exactly what you apply in FMEF, but that is a banking operation.

So, we need to learn that, and it's going to, that's the part, that strategic part, we also work hand-in-hand in business developments. Because, they are not an identified opportunity, because it's what you see every day. When people are complaining about an issue, you open it up, we look at it, as a team, we look at it and say, what can we bring, what can we profile? You work in business development and say, what can we do, set up, what we need to do, set up the meetings, the engagement, the parties we need to get into the room, before we even go into our meeting.

Have the affiliate to know, okay, is this acceptable enough? Do you understand me? And I know from the experience in ITEC, the way you guys deal with this, we can say, when we enter, we enter, right now, every day, we enter NHS, right? But the other things, they are not partners yet. In OEB, same thing. Even in GMB, same thing.

When we enter Bancorp, same thing. In the States, same thing. So we need to... The strategic support team, their job is very simple.

How do we engage ourselves? How do we become on moving to number one? Number two, how do we expand from there into other places? It is from there you identify extensions that there is struggling with. Those businesses or those agents are struggling with, that we can extend ourselves into, using that same line, using what we currently have. So we use what we have to

get what we want.

So, we need to know that. And, we'll be getting most of those people from the operational support team, because they will learn, they will be the experienced, they will be the 16 of what it takes to work with us. They now come and join.

We don't just want any of the newbies to just come in there, because they need to understand how we operate. They've been in our sessions, they've been in our strategic sessions. Also, please, after a few years, if you're still in support, you've not determined the parameters to work with HR management, because management is receptive to that fact.

You cannot be in support for more than a certain number of years. You must have either room to be running your own parts, or your headquarters, or you may advise to leave the department. You can work with V-Ray, you can work with I-Net.

Do you understand? You can work with WAX, there's no problem. It's WAX, not I-Net. Although, we try to give as much leeway as possible for people to grow, because we want a culture where ex-WAX means something.

But for that to happen, you cannot sit down there and be blocking new people from coming in. So, if you're going to be a plug in the machine, you will respect to be the one to work with. So, it's either you adapt, or die.

That's the two operations at once. Thank you very much. One major part of WAX operations is around the payroll period.

I do not see involvement or regulation on the internet. And this is something we do understand very well. Regulation means payroll.

So, how do you get that into... So, we are going to put them on that technology. That's why we also wanted to have this session to see whatever we are missing, because our technology side is now also distributing to the internet development and software, the data, the design. Why is software not on the project right now? No, no.

We are supposed to have data and... ..
