Good afternoon, guys. Good afternoon. In as much as we will be multitasking, I would like to introduce our speaker as it seems.

How are you? Very good. Please, guys, before we have time to talk, we would like to go over a few things. I know we have our various tasks, but sometimes, please, guys, let your equipment be very busy, you know, and forget to plan.

That's the reason for probably not moving here. I don't know. Don't forget to be strategic.

It will be busy going over very fast. All right? We're running. What's our strategy? We're running in the opposite direction.

So this meeting is of the essence and is long overdue because, as it seems, it is expedient. It is paramount that we all understand what we are doing. We understand.

Let's see, what is SDGC? What is SDGC? What is markers? What is houses? So that's why we're here, guys. That's why we're here. At the end of the day, one way or the other, this whole stuff is tied to all our goals and KPIs.

And if we don't get to understand these various projects, if we don't get to understand what everybody is doing at a particular time, we will not understand how to carry each other along. So unfortunately, unfortunately for us, as WACs, our project is kind of different from all other projects. We are like octopus that have so many legs to perform.

If you guys sit with management every day, instead of discussing how your business is doing, you notice that they're discussing new businesses, new opportunities. Every time, every day we go upstairs, they don't care that lenders are protesting or anything is happening. They think that's why they're paying us.

So what we keep hearing, everyone, as close as yesterday, we had another business idea that has to do with road union workers, transportation, care association. Yeah. They are coming every day.

I said this one. It's not a question. It's very expensive.

Myself and John had it. We had an executive management session. They have pointed it very clear to us that we are becoming too operational.

We need to be strategic. And we, we projects, product managers, we as managers, we need to communicate that. I'm sure there's a few senior managers who are joining us.

Shane will be joining us. Ben will be joining us. HR will also be joining us.

Let me just set the tone. By the time they're gone, I'll also be kind of... Please, I need the phone. Sorry.

Every device you have. So that's why I'm just taking time to, you know, nail this very role so that I don't have to go so far when they come back. But also for the standards, this one is very important.

You might see it as if your tasks, whatever you're doing is more important than what you're doing and sitting down here. But please remember that the way this is done, the strategies are set for executive managers passed down to the, you know, senior and mid-level managers. And these are the once renowned executive tasks that are translated into IT APIs.

So strategy comes first before anything. So it's very important that we align our total goals and our business goals. It's very important that we align our tasks with the objectives and goals of the company.

It is very, very, very important. So that's what we're having this strategic meeting today. We're going to cover cross-works, CPSNS, NAPAS, SGC, houses, obsidian, standard pool, landfill.

If I say this, it's not really enough for us to cover all the things that are in this discussion. But the common thing that we know of us in this room is wax. That's a common thing.

I'm sure just like when we get to that employment later, it was wax. But as we do now, we have various objects that... Okay. We have the... Our first talk has given us... They have given us this thing.

And it's not always going to be like this. So here is this thing. Going forward, it should not be business as usual.

We also do the right things to fight for whatever support we require. It's a long way to go. Because here is the thing that some of you don't say.

Because I know that some of you feel like... And I would like... It's obvious. Some of you feel you have quite overworked. Your job needs to make sense.

So here is the thing about running. You are not working... You are not working in one company. Yeah, you might work in one or four companies.

But you are not working in one company. All of this interseperates us. And it's our strength.

And it's our weakness. Our strength in the sense that we are new. Even when it is obvious that we can't get something done, but we say we will do it.

Even at this point, we are making promises. But we say we will do it. And we just find a way.

See, eventually, something will come up, and something will come out, and it just starts. It is who we are. It is our culture.

Mr. Bangbili here knows how work started. If he knew how work started, work was not supposed to exist. But we have to sit down every day.

I think I hear you. What's actually coming... I will start outside. I have to sit down every day because we have collected our contract data.

We have done demos. We have been there to multiple our demos. We have done demos.

We have done meetings, done everything. But they say we cannot go live. And it demands it.

That's one of the toughest problems that we have seen in our civilian life. Minister Akinna has said to go live. He called for a fire.

He said, let's have a meeting. That's not crazy. Mr. Akinna was supporting... That last meeting, not even a meeting.

He said, let's have a meeting. We have to sit down every day. We try a new strategy.

We try a new strategy. At that time, we had a big office like that. Currently, that was Mr. Emeka's office there.

Every morning, we have a strategy session there. Okay, this was a strategy meeting. It did not work.

What are we going to try today? What can we do? What can we try? That's one of the reasons anti-PSMS came up. It was out of... We went to do the one day they gave us demo. That's the day EACC came to arrest us.

They carried people inside of us and said, these people should be going. Our time is up. And that's how we came up with, okay, this is a third-party policy.

Can we build a central third-party settlement system? And that is now in the future, some of our other projects. I told you just once. Now, our biggest strength in the sense that we can build anything.

It's Patrick. Good night. Come on.

No, no, no. We can almost build anything. We can start a project.

We have done UHC, user acceptance test, the test application with PowerPoint and PDF. Because no is not an answer inside this department. Can you, before you tell us the thing, the

answer in this group is yes.

Now, what has not evolved over the past three years that WACS has not existed? WACS has not become a multi-headed monster. Each sub-project alone on their own, each sub-project on their own, are what an entire organization will decide to operate into. If you go outside and tell them that the thing that is managing WACS is us, me, you, happiness, they, me, you, happiness, or fun, and then the support team, nobody will believe it.

We've gone into meetings where the other team had more developers than we had staff inside that meeting. They had more developers than we had staff. I was telling people that we are a developer.

We are a developer. I was telling happiness, the first time creating direct about happiness and fever, it was later on when we started that the need for fever was financed. Because I don't go there when it was our development team.

Because it looked like, who are these people? Now, because of that, many things have been coming in the beginning parts when they are forming this stage, conceptual stage, for the last one to three years. We've not put the pressure on you guys intentionally. I am poor, and sometimes I have intentionally choose because we knew the weight of the chaos.

What just happens to the level of stability? Fever, happiness, fever knows how crazy WACS was then. Can you tell them if you remember how your day used to go when you first joined WACS? It's worse now. Worse now, how? In what sense? In terms of the entire business? We know that there were some issues that we initially had to resolve, but now we are starting.

The major challenge is the extent to which the business has grown. You are having to do more than before. Those are the things I want us to talk about.

This is in terms of this is a big business. If WACS don't rise, like this operation don't rise, it will be the biggest operations inside this company. Considering WACS alone, by the time Oxygen runs its operation, our credit is on their own.

They are just a player. We have to split up all the knowledge and everything that we can grow our business to be able to be advanced. The money they move in, not just in the current days, mostly their deduction is about 4 billion.

Multiply by 12, 4 times 12 is what? That's 60. 60 billion. That's what we should be able to do in 3 years' time.

That's just auxiliary. With your own building, with your staff, with your operations, your structure, with your multistate level operations running independently. NAPAS is going to be running parts of 36 states.

Not just parts federal. It's our will. Not the way we did WACS was current days and we used to strengthen our muscles.

All the problems that we have, all the issues that we have to fix is there. Imagine a system that has almost every private organization in the country collecting money for the game. That is a trillion-dollar force.

Houses. That is a business that we started with the idea of the lead national health fund. It's our friend.

He's just cheating to us. He keeps bringing on new ideas. That's what we have never thought about.

That is not at FNBA level. FNBA is a bank. We have discussed nationality.

Right now, the housing infrastructure in this country does not have a solid backdrop. That's why you can see rents are exorbitant. To own a house like Nigeria, it's not like you're going to appraise this.

If you like to be making two million Naira every month, by the time you pay rent, you don't have any savings. I'm not talking about owning a house. Imagine the long-term goal for housing is to build a business infrastructure for housing credit and management in this country.

While I'm talking, can you put the value of your United States mortgage package? Just mortgage package. Now, we've had discussions at housing level here. We are going to expand beyond FEDRA.

We started discussions on our private agencies and also even being the central source of house proliferation in this country. The mandate is here. It is here.

It's just going to be utilized. In any other country, it would have already been utilized. We are lucky that nobody utilized it for us.

This is because the housing system will connect to almost every part of this country. Nigeria is not short of land. They are not short of land at all.

It's every day they are selling land in this country. It's every day they are selling eight parts of land. Even if it's expensive, you will see the amount of free land in this town.

But we need to have a struggle around that. NCGC. I don't know who followed us to NCGC in 2004.

Me and Mr. Paul, after our session at NCGC, we played as a Virginia General Contributor. Do you know what NCGC told us? If we do this thing right, we will be the central source for credit and

direct debit in this country. Nobody has to solve this.

Nigeria is over 60 years old. Nobody has to solve this. The credit market, credit card and direct debit system, you are the one in charge.

That means almost any money Nigeria will move without you having a piece of it. We have our card systems. We have our loan systems.

To the point where they are telling us, hope we are ready to integrate into every single place in this country. Every single location in this country. That is how big NCGC can be.

And that is not just that. Every single strand of projects, we are already talking about how do we empower the pension system, how do we empower the national health insurance system and connect it with this thing. And remember all these things I've talked about.

Our houses, trillion era business. Our NAPDAS, trillion era business. NCGC, trillion era business.

We are not talking about WACS. WACS at its base, we are doing with the environs. My father used to call it Toro Pogo.

We are doing change. We have not expanded into police. We have not expanded into military and paramilitary.

And those guys take loans from the massive observance. That is a whole operation of free cash that we should be utilising. Right now, our pineapple filter, we have been playing around with this.

We have been playing around with this. You can see that pineapple filter. Imagine being the union of credits and of assets.

We are saying, even if you don't have money to buy something, but because you have economic activities, you should be able to get things. So, we will not just be an arbiter here. We started discussions in the village.

Who was in that meeting? Who was in that meeting? In that session, we are looking at breaking every single vehicular operations into the work system. People are applying for loans in other parts. Apart from land, after land, the largest collateral after land is vehicles.

If we are the one that is one of the biggest source of applying for vehicles, having or removing vehicles during the validation of whether this vehicle you want to apply for a loan in five years is the same vehicle. Do you see bigger businesses? What can become a bigger player in the world economies? In the vendor sector of buying and giving back, many banks do not have the infrastructure and the knowledge to build us. We have the experience, we have the infrastructure, we have the knowledge, and we have the skills and finances to run that operation.

We can become the backbone of banks and organizations without having to sometimes break a

sweat. So, that is what we can become. Mr. Paul is going to take us through what we are going to do, our agenda.

This meeting is not like any other because going forward, every operation will be strategic. The daily tasks, the daily things, those are part of your daily job. You guys are going to become not just guys that are here to help us.

You are going to be working, setting up your strategy, refining your strategy because each level of you, we are looking at it, we have your teams under you. And your teams, we have to come up with strategy or else the team is going to break. So we need to start working on how to build strategies, how to organize strategies.

We will not get it right first time. We will not get it right the next time. But we will eventually get it right.

Build the structure, build the templates, build the DNA that anybody coming in is just going to plug into it. Our support system, all these operations that we are talking about now, our support system has to be top-notch. Our support system is not civil servants is coming, we are stealing them.

It's not going to be that way forward. We are not going to divide our support system into two. We are going to have the operational people and we are going to have the strategic people.

The new piece of people coming in can work on the operational side. But you have to grow from the operational to the strategic. Because for every piece that you put, whether it's FNPN, whether it's NAPTAS, whether it's the state, whether it's an operation, whether it's at NCGC, we need to find a way that we enter there is not just it.

Wax did not enter as wax. We started as data capture. Later we entered PD.

Later we entered WAX. Now we are having NAPTAS. We are having FWI.

That's how we are going to be inside each of these operations. And we are going to need the strategic people on the side of support to work because the daily operation is how do we entrench ourselves here? How do we become unthinkable here? And how is it that tomorrow somebody comes and says this is the minister, he doesn't like us and they tell him we have to go to work with them? Because we are not the DNA of that area. So, let me give you a brief of where we are going, what we are trying to do.

We also try and give us a feeling to what we are doing at the large scale level, at the focal level, what we are doing, who are we, and also tips on how to get better. I didn't expect all of us to get better today. Sorry, he has gone out to come back.

I didn't expect us to get better today. I didn't expect us to get it right next month. But we will keep

trying till we get there.

So, with that, I'll turn it over to Mr. Paul. Mr. Paul, over to you, sir. Thank you.

Thank you, John. Thank you. Thank you, Mr. Sheldon, for taking our time from your very busy schedule.

So, I'll just run us through our agenda for today. What are our expectations, what are our expected outcomes for this session. I see you're very distracted, so you'll be out of time tomorrow.

So, I'll just let you take your time. So, just for the benefit of the doubts, let's just exercise the wall. This session is a strategic team alignment meeting.

So, we're going to be meeting at zero. We've already started this already, but we still do a zig kind of summary across our projects. We're going to be having a brief introduction of the projects.

We're also going to have a brief introduction overview of all the projects and sub-projects. We're also going to be discussing the program statements. From this program statement, we're going to look at this team structure which we have 120 HRs to come up with.

We're also going to be telling us what we have discussed to come up with a business operation strategy going forward. Item number five, we're going to be getting management in-depth. This is where Mr. Sheffield, Mr. Ben, and other senior managers are going to come in to tell us and identify the gaps because of where we are sitting.

Where we cannot see what they are seeing. So we're going to get management in-depth. We're going to have some form of overview.

Also, under the business operation strategy is where I'm also going to get to produce in-depth. The things you're writing down now, nobody has to write down the strategies. We're going to allow each and every one of you to go through the strategy just as we are asking you to come up with a strategy.

We're expecting each and every one of you to already know the goals they have for 2026. We're expecting you to see this as one of the things. Not just a task-oriented, but a goal-oriented.

We're going to have an interactive session on that in a minute. Timekeeper, what's the time for each of this? Fifteen minutes. Fifteen minutes.

Are we going to remind you to remind us? No. That means you have to be very attentive. Okay.

We have done a form of brief which we've done shortly already. We're going to briefly tell us about the various components and approaches that we're going to use so that at some point we

can confidently say because four columns is the structure of continuity. If I'm not there, John is not there, nothing stops management from calling on any of you to ask for updates on the project.

This is an open communication form of business operation that we want to do. At the end of the day, we expect everyone in this team to be able to say this will help us, this will help CGSMS, this will help SCGC. You guys understand.

We don't want that knowledge gap where someone is not around and this is the danger of being very task-oriented. We try to discourage that as much as possible, to be very task-oriented. If you understand the goal and objective of the company and the goal of every project, you will be easily carried along and you will not see anything that's bugging you.

For example, when I ask you to go and follow our contracts, you won't see it as if you're taking away from my tasks because you understand the importance of the contract and without the contract, you can't even do your work. So that's why we think this is very important for us to have this basic knowledge of all our projects. We all know why we're here.

What is the reason why we're here? How did you get that knowledge of the project? How did you get that project? So I think we have to have CGSMS. Does anyone in the team know what CGSMS is? I would prefer somebody from support. People that are not doing the daily operations.

So let's make CGSMS for us. What's in Canada? Because I'm sure you guys have been hearing it. You have been seeing it on your sheets.

You have talked about it. You have been in many play sessions and mid-quarter sessions. So... Madam Wendy? If you don't know, just so you don't know.

Do you know what CGSMS is about? I don't know. I don't know the definition. Do you know what it's supposed to be about? Madam Margaret? I know it's about property deductions that are being used in agriculture.

So it's a platform that will house every deduction including warrants, taxes, housing, any property deduction. I don't know. I'm not trying to know.

I want to ask a question. Because it's been long I'm thinking about. So we have third party services.

So the third party rights. It signifies that there is a first party rights and there is a second party rights. So who are those first and second parties?
